

POOL PROMPT

Tintometer Information 01/2010

Lovibond® POOLTESTER – THE ORIGINAL. Now even better than before!

Is it possible to make the original even better ?

Yes, it is!

Your own pool in the garden or in the house. For many people this represents the height of pleasure and makes for real quality of life. However, various water treatment products are required in combination to ensure that bathing remains a pleasure, with top water quality unaffected by contamination and bacteria.

Both the disinfectant effect (to kill bacteria) and the right pH value must be maintained. And, once the water treatment products have been added, it is essential to check their effectiveness.

The DPD method is used to check on treatment agents containing chlorine and the phenol red indicator is used to check the pH value.

Based on these methods the best solution is the proven Lovibond® Pooltester, with long-term storage reagent tablets.

The unit makes an attractive appearance in its modern, colourful new packaging. The cover flap mechanism makes it easy to take out any of the utensils and measurements are even simpler to carry out by hand.

The instructions have also been updated to meet modern needs, with pictograms which can immediately be understood by any owner of a pool or whirlpool. High-accuracy display and ease of handling go without saying. And anyone preferring alternative water treatment agents such as active oxygen or bromine will also welcome the new, practical and attractive housing.

bsw-Infotage 2010

Are you interested?

Interested in the Pool,-Spa- and Wellness-Business?

In this case you shouldn't miss the special bsw-event, being held on February 26th and 27th 2010 at the Forum of the Exhibition Center Frankfurt / Main, Germany.

More than 60 companies are showing 'the state of the art technology' in this specific market.

Lovibond® will demonstrate the newest water test technology to make sure that the water quality meets the hygiene standards under all circumstances.

We are looking forward to seeing you!

Pooltester Active Oxygen-Copper-pH

The process combination of active oxygen-copper-pH is being increasingly accepted as an alternative water treatment process in domestic pools & spas.

The recommended concentration of active oxygen in water between 3 and 8 mg/l guarantees a quick rate of disinfection. In order to avoid the formation of algae, the copper concentration should be regulated between 0.4 and 0.7 mg/l.

The recommended value for pH is between 7.0 and 7.4.

The measurements are conducted in tandem with the newly developed Lovibond® pool test using tablet reagents which exhibit long-term stability. Handling and measurement is very easy, so the results are available immediately.

Range

O₂ 0 - 10 mg/l ; Copper 0.1 - 1.0 mg/l ;
pH 6.8 - 8.2 pH

Order code 15 52 35

Delivery Content

Pooltester, Tablet reagents for each 20 test, instruction manual, in a sturdy plastic case
Packaging unit = 12 tester
