Lovibond® wins POOL ASIA AWARD 2011

The first Pool Asia EXPO & CONFERENCE EXHIBITION took place in Phuket, Thailand, from 4 to 6. March, 2011. Many leading manufacturers took part in this event as exhibitors including firms from Germany, Australia and Thailand. Tintometer GmbH, known for its range of water analysis instruments and reagents under the trade-name Lovibond®, was selected for the POOL

ASIA AWARD 2011 in recognition of the company's 15 years of continuous contribution to improvements in water quality in pools & spas across South-East Asia. The award was presented by the organiser of the event, Dr. Josef Konrad to Martin Woelk, Sales Director of Tintometer GmbH.

Lovibond®-Catalogue Pool & Spa Water Analysis 2011

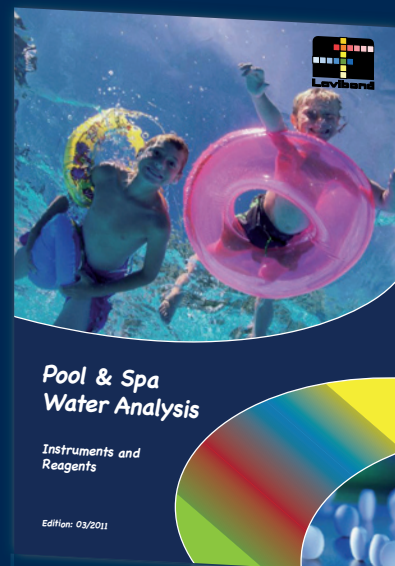

We are pleased to announce our latest Lovibond® catalogue "Pool & Spa Water Analysis 2011", hot-off-the press and in time for the approaching swimming pool season.

Pristine, pure water is an absolute priority in pools and spas and must be checked regularly. Lovibond® water testing instruments and reagents address all your needs, whether in the private or public sector, where the precise testing of parameters and accurate certification records are a necessity.

We wish you a successful 2011 season and look forward to continuing to work with you throughout the year.

If you have not yet received the latest issue of the catalogue, please request your free copy today from our sales department: sales@tintometer.de.

To make things even easier, – it is also available to download from the Internet at: www.lovibond.com

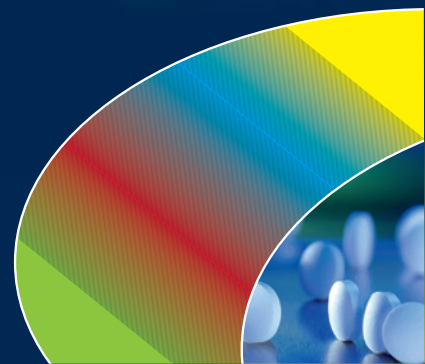

Pool exhibition in Greece

Together with our regional agent, N. Krallis S.A., Tintometer had the pleasure of taking part in the 1st International Pool Salon in Athens.

Despite the difficult economic situation in Greece, visitor numbers exceeded all expectations and interest in the Lovibond® water analysis instruments for private and public swimming pools was extremely positive.

In parallel with the event, the Greek swimming pool association was also established.

Tintometer®-Group

OTZ (One-Time-Zero) function in PoolDirect & PoolDirect 9 in 1

Zero setting (OTZ)

From April 2011, these instruments are now shipping with a new mode function making it possible to store the zero settings in the instruments. This provides an easy means of carrying out measurements even more quickly, particularly when selecting different parameters for obtaining results.

The zero setting is stored until the device is switched off (One Time Zero - OTZ). A new zero setting can be carried out at any time, if required. This new functionality is available for all instruments running software version V012.001.3.003.032. The new software version is also available as an upgrade for existing instruments and can be downloaded now from the Lovibond® web-site.

Full information on the Lovibond® products, measurement ranges, reagents and accessories is provided in our current catalogue and may also be viewed at www.lovibond.com

POOLTESTER – Copper LR & HR – pH value

The new, hand-held visual comparator from Lovibond® introduces a new method based on the formation of copper ions.

In swimming pool water, the ideal measurement should lie between approx. 0.5 and 0.7 mg/l (in Germany, the limit for drinking water is 2.0 mg/l).

The new "Pooltester" has a low copper range with precision measurement of values from 0.1 to 1.0 mg/l and also a range of 0.5 to 5.0 mg/l which is equivalent to that of the Lovibond® photometer.

In addition to providing information on the concentration of copper, it is also possible to measure pH between 6.8 and 8.2.
